

INTERNSHIP DATA BRIEFING: RETAIL SALES PERFORMANCE ANALYTICS

Prepared by: David Sarpong

Objective: End-to-end processing and trend identification of international transactional data history spanning 541,909 raw records.

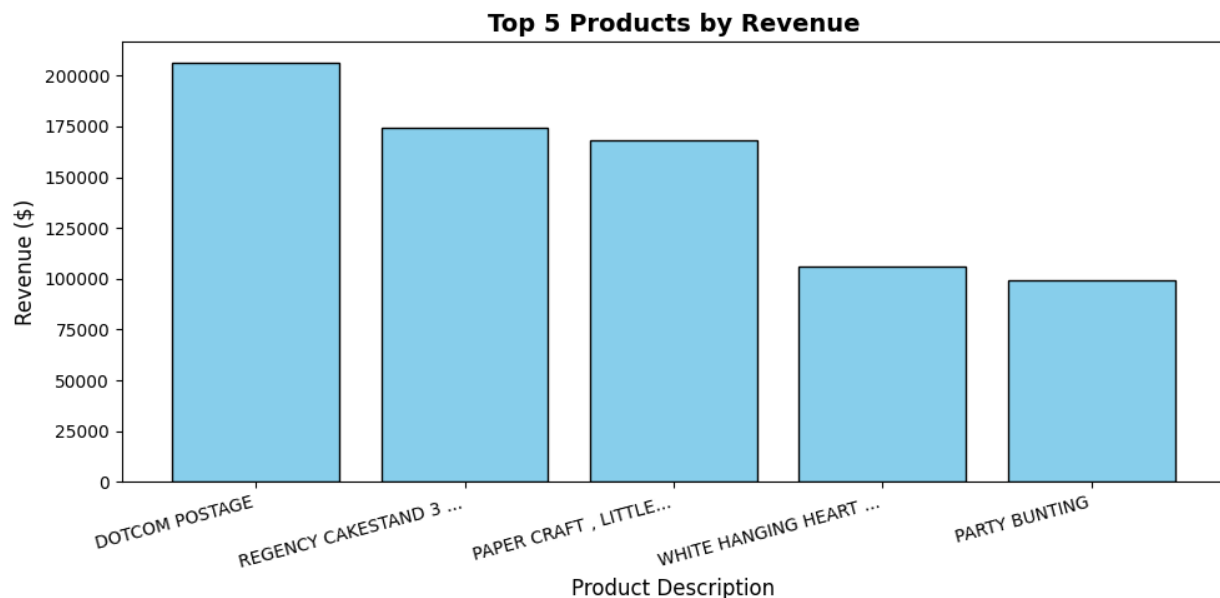

Section -1 enterprise metrics

The raw data was extracted from the e-commerce csv data file. Transactions representing returns and cancellations with 'C' (zero-unit) were removed to prevent skewing gross revenue metrics.

- Total Enterprise Net Revenue: \$10,666,684.54
- Total Unique Volume of Successful Orders: 19,960

The invoices showcase a high volume of wholesale-to-retail business with frequent transactions.

Section-2 product performance and revenue streams

- DOTCOM POSTAGE: \$206,248.77
- REGENCY CAKESTAND 3 TIER: \$174,484.74
- PAPER CRAFT, LITTLE BIRDIE: \$168,469.60
- WHITE HANGING HEART T-LIGHT HOLDER: \$106,292.77
- PARTY BUNTING: \$99,504.33

Section-3 geographical expansion

An analysis of international customer bases was conducted by tracking regional variations outside the primary point-of-sale hub.

- United Kingdom (Domestic Hub): \$9,025,222.08
- Netherland: \$285,446.34
- Ireland: \$283,453.96
- Germany: \$228,867.14
- France:\$209,715.11

Section -4

Making over \$10.6 million from nearly 20,000 unique orders shows that this shop handles a really massive volume of individual transactions and behaves like a highly active wholesale supplier.

After cleaning up the data, here are the real baseline metrics for the store:

- Total Revenue: \$10,666,684.54
- Total Successful Orders: 19,960
